FairGrade / Sprint 3 evaluation

Khaled - browser proctoring | Prepared 31 October 2026
Omar's deployed API contract adopted. Earlier Lambda/SQL/Terraform proposal superseded.

This table distinguishes executed software checks from field measurements that need the real laptop, authenticated HTTPS app and consenting participants. No simulated result is counted as human accuracy or AWS acceptance.

Measure / requirement	Observed result	Scope / evidence
Client and local demo tests	22 passed	Multipart POST, retries, errors, UUID/auth and local pipeline
Statistics tests	5 passed	Flags/hour, confidence intervals, held-out identity analysis
Legacy proposal regression	8 passed	Superseded local backend only; not Omar's API
Browser integration checks	27 passed (9 + 5 + 13)	Local flow, mocked auth, embedding/review/flush; phase3 reports
Nested model assets	All 3 systems ran; 25 asset requests	Actual blank-image inference; no isolation or SharedArrayBuffer
Real-camera AWS pipeline	Not measured here	Missing test-account access, HTTPS session and physical webcam
20-minute target-laptop session	Not measured; laptop model unknown	CPU %, process memory, FPS and trigger-to-log latency required
Normal sessions / false flags	Not measured; rate and CI unknown	Required: five 10-minute sessions; at least 3 people with written consent
Phone / second face / leaving	Not measured; misses and CI unknown	Required: 10 deliberate cases for each reason
Identity swap	Not measured; misses and CI unknown	Required: 5 deliberate cases; self-captured reference
Threshold changes	None	Existing defaults retained; no participant data supports tuning

Human analysis method: false flags per armed monitoring hour with exact 95% Poisson intervals; deliberate detection rate and miss count with 95% Wilson intervals. No exposure means an unknown rate, not zero errors. Keep deliberate cases separate from normal exposure.

Limits: self-captured reference, no liveness; visible tab required; page close can lose clips; YOLOv8n is AGPL-3.0 licensed; flags support human review and do not prove misconduct. See docs/LIMITATIONS.md.

Completion evidence needed: follow docs/LIVE-ACCEPTANCE.md and TRIAL-PROTOCOL.md. Replace unknown field measurements only with operator-recorded results. AI assistance was used for this adaptation; Khaled must review and explain it.
